

Trend Micro™

Mobile Security

Protection for Your Smartphone

Trend Micro Mobile Security protects your contact information and personal data from viruses and spam. No need to worry even if your smartphone is physically lost or stolen. There are special features designed to protect your information. Go mobile on the Internet with confidence any time anywhere.

Secure Your Smartphone from Active Online Threats

The combination of anti-virus, anti-spyware, and Trend's unique 'web reputation services' offer multi-layered, solid protection for your phone or PDA.

Perform Automatic and Manual Scanning

It performs both automatic, real-time malware scans and allows users to initiate manual scans as well.

Customize Parental Controls

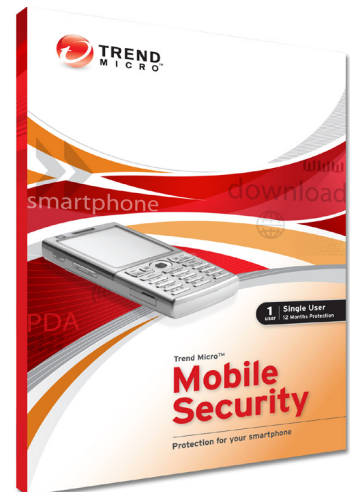

If you have children and they have a cell phone, you can protect them as well with Parental Controls. Both the logs and the parental control settings are protected by a security password.

Guard with Multi-layered Anti-Theft Protection

If your smart phone is ever lost or stolen, you can send a remote message that will allow you to wipe information from the phone. If someone tries to remove or change your phone's SIM card, TMMS will lock the device when it is turned on.

Protect Your Information Against Accidental Loss

Password protection shields information from unauthorized access and minimizes accidental data 'leakage'.

SOFTWARE

- Antivirus
- SMS anti-spam
