

Trend Micro™

ScanMail™ Suite for Microsoft® Exchange

High security. Low administration. All in real time.

Enterprises need powerful, multi-layered messaging security to protect business-critical email environments from viruses, spyware, spam, phishing, and email-borne web threats. Gateway security may stop the majority of incoming threats at the perimeter, but the mail server is a crucial point for securing both inbound and outbound communications and preventing data loss.

Trend Micro ScanMail for Microsoft Exchange is the only mail server security solution that filters and blocks email containing links to malicious websites—the #1 threat vector today. In-the-cloud Web Reputation and Email Reputation, powered by the Trend Micro™ Smart Protection Network™, stop the latest attacks immediately—well before pattern files are deployed. In addition, our industry-leading scan engines filter the wide range of known threats—without slowing performance. Plus, regional content filters protect data privacy.

ScanMail is optimized for the most recent Microsoft Exchange platforms to streamline administration and minimize server impact, beating the total cost of competitive solutions by up to 50 percent.¹ **The bottom line: ScanMail delivers better protection against data theft and data loss with the lowest total cost of ownership.**

KEY FEATURES

Leading Antivirus, Antispyware, Antispam, and Antiphishing Security

- Detects and removes viruses, spyware, Trojans, and worms
- Stops zero-day threats with signature-independent technology
- Employs pattern matching, heuristics, and cloud queries to stop unwanted and fraudulent messages

New! Email Reputation Technology (for Exchange Edge role)

- Bars messages from known bad senders—without relying on content inspection
- Provides immediate protection and keeps network connections free using up-to-the-minute threat intelligence

Advanced Content Filtering

- Protects sensitive information by using data loss prevention (DLP) to filter data based on keywords, regular expressions, and new regional identifiers
- Enables granular Active Directory-based policy enforcement
- Prevents compliance violations with more regional pre-canned policies

Unique! Web Reputation Technology

- Blocks messages with malicious web links—the #1 threat today
- Provides immediate protection using up-to-the-minute threat intelligence

Half the Administration of Competitive Products

- Strong group configuration and management with centralized logging and reporting
- **New!** Role-based access control with single sign-on
- **New!** Audit logging to track changes to configuration settings
- Integration with Microsoft System Center Operations Manager and Microsoft Outlook® Junk E-mail Filter
- Full Microsoft cluster support, certified for Veritas™

Optimized for Exchange

- Native 64-bit support for Exchange 2010 and 2007; 32-bit support for Exchange 2003/2000
- Configurable, multi-threaded scanning and CPU throttling, with use of AV Stamp to avoid duplicative inspection

SOFTWARE

Protection Points

- Mail Server

Threat Protection

- Antivirus
- Antispyware
- Antispam
- Antiphishing
- Content Filtering
- Web Threat Protection

KEY BENEFITS

Comprehensive Security

Blocks the wide range of spam, malware, and blended threats

Immediate Protection

Protects against fast-moving, constantly evolving attacks

Lower IT Costs

Minimizes administrative headaches with strong central management

Higher Performance

Scans efficiently with negligible impact on server performance

Reduced Business Risks

Prevents network invasion, system infection, identity theft, data loss, and compliance violations

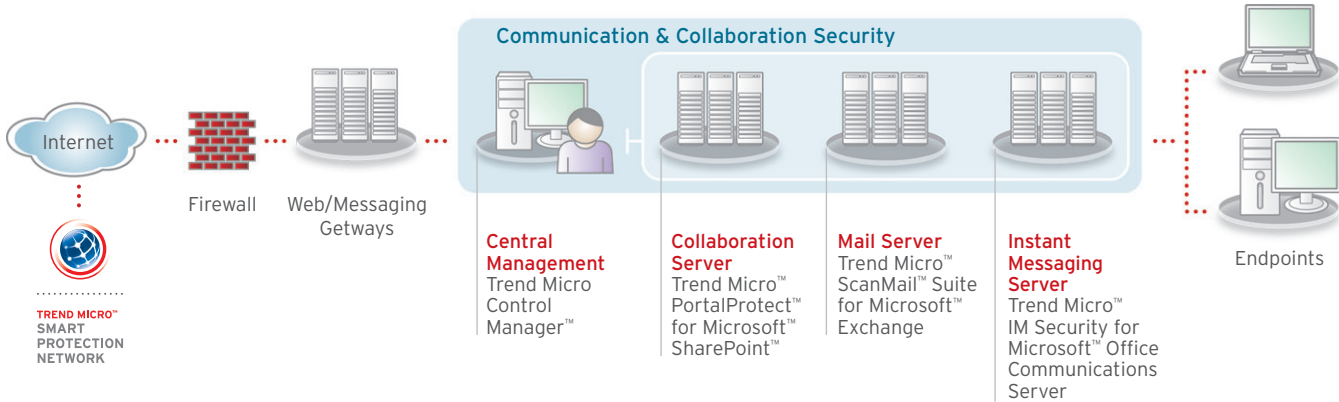

“ [ScanMail’s] content filtering rules allowed us to prevent social security numbers or credit card numbers from being accidentally sent out in emails. The new templates in the latest release of ScanMail have made it easy for us to further protect our reputation. With ScanMail in place, we can make sure that our employees’ email communications are very professional. ”

Eric Erickson

Vice President, Information Systems,
Liberty First Credit Union

ScanMail Suite for Microsoft Exchange is part of **Trend Micro™ Communication & Collaboration Security**, a four-in-one solution to protect your Microsoft email, IM, and collaboration environments. The unique cloud-client security model and correlated threat intelligence of the Smart Protection Network stop threats across all environments so that you can maximize productivity and minimize the risk. And with centralized management, optimized performance, and tight platform integration, it further reduces administration.

Trend Micro Communication & Collaboration Security delivers an airtight defense against the wide range of threats at multiple points and attack vectors.

Communication & Collaboration Security	IM Security	ScanMail Suite	PortalProtect
Protection Point	IM Servers	Mail Servers	Collaboration Servers
Web Reputation	✓	✓	✓
Email Reputation		✓	
Antivirus	✓	✓	✓
Antispyware	✓	✓	✓
Antispam		✓	
Antiphishing	✓	✓
